

In relation to the park, the project of is proceeded by the "consellerías" that have the competitions (environment for being Red Natura, Patrimony for the Way of Santiago, Territorial Politics(Policy) for being in zone of servitude of Coasts). At the moment the permission of environment is had, but as for others still they are not granted.

As for the Gas, the work is stopped until they arrange a topic with patrimony but that apparently it is going to be unblocked soon enough. The gas will be canalized for ancient N - VI instead of going for the road of access to the beach. In addition the deepest pot-holes were patched, and in all that they open to canalize they will asphalt all the road of the beach, in all its width. **Also we hope that the N - VI, stay in perfect conditions after the step of the gas.**

If there is no asphalted surface up to the moment, it is due to the fact that the asphalted surface of the road of the beach they it execute among Fenosa and Gas Galicia.
